# Analytics Capabilities Performance

Unlock true value of your data with augmented analytics

## BI consulting

A careful analysis of existing infrastructure, data sources, data engineering and various analytics layers to build a business intelligence landscape that is secure, scalable & robust and conforms to business goals.

## Visualization

Designing visually appealing and insightful dashboards after a thorough understanding of your technical environment, business logics and KPIs to take business decision making a notch higher for better business growth.

## Data Discovery

Transformation of unstructured data into a data pool that can be analyzed at various levels and parameters to give actionable insights for better business performance.

## Advanced Analytics

Predictive and prescriptive analytics through improved analytical platforms with new guidelines for data discovery and their analysis helping in improved ability to visualize the result.

# BLANCCO Data Erasure & Destruction. Differentiator

Code AG

The only software company that diagnoses and erases wide variety of IT assets from a single solution

# BLANCO Differentiator

When to perform data erasure in the enterprise  
@home, on-prem and in-cloud

## Customer Demand

The Right to be Forgotten allows EU citizens to request removal of their data from your system.

## Employee Onboarding & Departures

Protect against data breaches at transition points in your hardware's chain of custody and use.

## Equipment End-of-Life

When a server, storage, device or other IT asset is ready to be reused, resold or discarded – any data must be erased.

## Cloud Entry/Exit

When you are exiting a cloud service or a managed services provider is handling your data, data erasure policies must still be enforced to keep control over the data.

## Data Migration

When data is moved from one location to another, from an old server to a new one, or virtual machine to another – the original data location must be erased.

## Disaster Recovery Exercises

Following the successful restoration of production systems, any data left on the recovery disks should be erased.

## Data End-of-Life, Data Retention

When data is no longer needed on any storage device, policies can enforce the erasure of virtual machines, files and folders with automated routines within your existing systems.
